

PDF Document 1

Welcome to the PDF Processing Skill!

This is the content of the first PDF file.

Key Features:

- Created using ReportLab library
- Formatted text with paragraphs
- Easy to merge with other PDFs

Next, we will create a second PDF file,
then merge them together.

PDF (Portable Document Format) is a
cross-platform file format that maintains
consistent display across various devices.

The ReportLab library is a powerful Python
tool for creating PDFs programmatically.

PDF Document 2

This is the second PDF file!

PDF merging technology allows us to combine multiple PDF files into one.

Use cases for PDF merging:

- Assembling multi-page reports
- Combining chapter documents
- Creating complete manuals
- Archiving related documents

We use PyMuPDF (fitz) library to perform the PDF merging operation.

PyMuPDF is a high-performance Python library providing PDF reading, creation, editing, and merging capabilities.

The merged PDF will contain all pages from both source files in order.

Thank you for using this demo!
